

## HAND PROTECTION ALTERNATIVES TO SINGLE USE

### FOR OILY ENVIRONMENTS AND APPLICATIONS

While demand for PPE continues to increase as a result of the COVID-19 pandemic, Ansell recognizes that it is important to consider temporary or alternate solutions to mitigate critical supply shortages such as those related to single use gloves. These HyFlex® gloves are designed to provide barrier protection against oil and liquid, but are not tested or certified to protect against viruses.

Multipurpose	Cut Protection
<p><b>HyFlex® 11-925</b></p> <ul style="list-style-type: none"> <li>¾ dip geometry for added protection against oil exposure &amp; knuckle abrasion</li> <li>Double nitrile coating for increased oil protection and grip</li> <li>18G liner for extreme comfort</li> </ul> <p>   </p> <p>    </p> 	<p><b>HyFlex® 11-427</b></p> <ul style="list-style-type: none"> <li>Provides not only the protection needed in dry and slightly oily environments, but also educates workers to understand risk levels</li> <li>The color indicator system on the glove ensures the wearer of always having the appropriate cut level performance</li> </ul> <p>   </p> <p>   </p> <p>  </p>

### Definition of Re-usable versus Limited or Single-use PPE

Re-usable*	Limited or Single Use
PPE that is constructed from materials which allow it to be cleaned after repeated exposure to a hazard, such that it remains suitable for continued use.	PPE for limited duration of use. To be worn until hygienic cleaning becomes necessary or contamination of a hazard has occurred, and disposal is required.

\*Based on CENISO/TR 11610 Protective Clothing Vocabulary

Note: For reusable PPE that is not claimed and/or certified for virus protection, proper sanitization and laundering guidelines can be applied to help prevent the spread of viral contamination.
